DETAILED ACTION

1. The following is an examiner's statement of reasons for allowance:

The invention relates to a blast furnace coke having high reactivity and high strength produced by a method comprising charging a coal blend comprising 60 wt% or more of semi-heavy caking coal having medium rank and low fluidity in which a content of a non-melting inert component is 30 vol% or more in total into a coke oven; and coking the coal blend, such that the coke has a pore size distribution in which a content ratio of pores having a diameter of less than 10 microns is from 12 vol% to 15 vol% and a content ratio of pores having a diameter of from 10 microns to 100 micron is from 10 vol% to 15 vol%. The prior art fails to teach or suggest cooling a coal blend wherein the coke has a pore size distribution in which a content ratio of pores having diameter of less than 10 micron is from 12-15 volume percent and a content ratio of pores having a diameter of from 10 microns to 100 microns from 10-15 volume percent.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to N. Bhat whose telephone number is 571-272-1397. The examiner can normally be reached on Monday-Friday, 9:30AM-6:00PM.
